

**Amendments to the Specification:**

Please add the following new section and associated paragraphs after the section titled "Summary of the Invention" and before the section titled "Detailed Description of the Invention" on page 3:

**BRIEF DESCRIPTION OF THE DRAWINGS**

The subject application is described with reference to certain figures, including:

Figure 1 is a diagram of a cable replacement implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 2 is a diagram illustrating a print by reference implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 3 is a diagram illustrating a remote print implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 4 is a diagram illustrating a three-in-one telephone implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 5 is a diagram illustrating an Internet bridge implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 6 is a diagram illustrating an interactive conference implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 7 is a diagram illustrating a wireless headset implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 8 is a diagram illustrating an automatic synchronization implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 9 is a diagram illustrating a wireless cluster print implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 10 is a diagram illustrating a wireless document distribution implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 11 is a diagram illustrating a wireless management implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 12 is a diagram illustrating a wireless gateway implementation of the system for wireless connection to a document processor according to one embodiment of the subject application;

Figure 13 is a block diagram illustrating an implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 14 is a flowchart illustrating an implementation in the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 15 is a flowchart illustrating port configuration in the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 16 is a flowchart illustrating an implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 17 is a flowchart illustrating client side configuration in the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 18 is a screen template illustrating a printer configuration page for use in the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 19 is a screen template illustrating a printer configuration port addition page for use in the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 20 is a screen template illustrating depicting wireless devices for use in the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 21 is a screen template illustrating a printer port configuration page for use in the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 22 is a flowchart illustrating a wireless printing implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 23 is a diagram illustrating a URL-printing implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 24 is a flowchart diagram illustrating the URL-printing implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 25 is a flowchart illustrating the URL-printing implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application;

Figure 26 is a flowchart illustrating an implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application; and

Figure 27 is a flowchart illustrating an implementation of the system and method for wireless connection to a document processor according to one embodiment of the subject application.
